Summary*

Washington State Gambling Commission

Gambling Taxes Report

Executive Summary

The changing face of gambling in Washington State has raised many questions, including ones about gambling taxes. Because of this, the Commissioners asked staff to prepare a report focusing on the following:

- 1) History of the taxing structure for gambling in Washington State, including what the tax revenue was intended for and court cases interpreting the tax provisions;
- 2) Timeline of significant events related to gambling taxes and the changes in gambling revenue and the number of licensees;
- 3) Comparison of commercial card rooms in 1973 and today;
- 4) Survey of 8 states similar to Washington in population and/or in the gambling activities they allow, including information about gross receipts for the gambling activities, tax rates, to whom taxes are paid (usually state or local governments), how taxes are used, whether charitable/non-profit organizations pay taxes, license fees or other assessments paid, and betting limits;
- 5) State and local B&O taxes;
- 6) Changes in market shares for net receipts and taxes paid for charitable/non-profit and commercial organizations;
- 7) Range of gambling tax rates in local jurisdictions; and
- 8) Percent of cities' revenues from gambling taxes.

We know that significant congressional and legislative events have impacted gambling in Washington State today. For example, the Indian Gaming Regulatory Act (IGRA), passed by Congress in 1988, resulted in the opening of tribal casinos. Today there are 22 tribal casinos in Washington. In addition, legislative changes have also impacted gambling in the state. For example, changes made in 1996 and 1997 increased the number of card tables allowed from five to fifteen and allowed house-banking. Today, there are approximately 80 house-banked card rooms in the state.

Although this report does not focus on tribal gaming, we have included one set of pie charts in the Appendix, which show how the net receipts for tribal

gaming, the other activities the Gambling Commission regulates, the State Lottery, and horse racing have changed over the past three years. Today tribal gaming net receipts surpass all other forms of commercial and charitable/non-profit gambling combined.

Our main sources of information for this report included legislative history, information from eight selected states obtained through phone calls and reviewing their websites, data from a survey the Association of Washington Cities conducted in 2002, and statistical data that we, as the Gambling Commission, collect. Based on this information, we were able to make several findings.

Key Findings

- ***Historical records indicate that gambling taxes were intended to help local jurisdictions with enforcement issues related to gambling. The tax was not implemented as a “sin tax.” Prior to passage of the Gambling Act of 1973, then-Governor Evans established the Governor’s Ad Hoc Committee on Gambling. The Committee recommended that any local jurisdiction which opted to prohibit a form of legalized gambling “would not receive revenue shares from that gambling.”***
- ***In a sampling of 15 cities and 4 major counties that currently or previously had house-banked card rooms within their jurisdictions, 14 house-banked card rooms have closed. Several jurisdictions have lowered the tax rate for card rooms, perhaps in anticipation of attracting future operators and their resulting tax revenues or to keep current operators from leaving or closing. There has also been anecdotal information suggesting that some jurisdictions have set the tax at the maximum rate in order to discourage future growth.***
- ***Of the states we contacted, Washington is the only state without a state gambling tax.***

Key Findings Continued

- *Of the states surveyed, none have exactly the same activities as Washington. Some states do not allow punchboard/pull-tabs. In addition, Washington is the only state with commercial punchboard/pull-tabs. In some states, punchboard/pull-tabs may be located and operated at commercial businesses, but the proceeds are for the benefit of charitable/non-profit organizations. Some states have commercial (non-tribal) casinos with both house-banked card rooms and electronic machines, such as slot machines or video lottery.*
- *Only Minnesota exceeds Washington in gross gambling receipts for punchboard/pull-tabs. Of the eight states surveyed, all except Washington have a punchboard/pull-tab gambling tax collected by the state.*
- *Only Michigan exceeds Washington in gross gambling receipts for bingo. Of the states surveyed, all had a bingo gambling tax collected by the state, except California, where the local jurisdictions regulate bingo instead of the state, and South Dakota, which does not track bingo.*
- *The lowest non-tribal betting limit among the states surveyed is Colorado, where the limit is \$5 (and interestingly, set by the state Constitution). In North Dakota, the non-tribal betting limit is \$25 and in Minnesota it is \$300. South Dakota and Washington State have non-tribal betting limits of \$100 (although recently the limit was raised in Washington to \$200 for a limited number of tables). California, Michigan, Nevada, and New Jersey do not have betting limits. In practice, the casinos in these states set their own limits, but it is not set by law. New Jersey explained that the casinos want to set limits to protect themselves from card counters. By minimizing the betting limit, they can minimize their risk of loss.*

Key Findings Continued

- *Tribal betting limits do not always match the commercial betting limits. For instance, in Minnesota, the commercial betting limit is \$300 and the tribal betting limit is \$500. This is true also in North Dakota, where the commercial betting limit is \$25 and the tribal betting limit is \$250. Finally, it is also true in Washington where the commercial betting limit is \$100 (with an exception for a few tables at \$200) and the tribal betting limit is \$500. Colorado and South Dakota have the same betting limits for commercial and tribal casinos.*
- *In Washington, commercial card rooms have seen the most significant increase and now have 57% of the market share for gambling net receipts (compared to 6% of the market share in 1985 and 1994).*
- *There has been a decline in net receipts for commercial punchboard/pull-tab operators.*
- *Overall, there has been a decline in market share for charitable/non-profit operators.*
- *For fiscal year 2003, commercial operators had 86% of the market share for net receipts, but paid 93% of the gambling taxes. Charitable/non-profit operators, on the other hand, had 14% of the market share for net receipts and paid 7% of the taxes.*
- *Gambling tax rates vary by city or county.*
- *75 cities have gambling, but do not tax it.*
- *Both charitable and commercial organizations in Washington State pay B&O tax, which is set at .015% based on net receipts. For 2002, this accounted for \$6.2 million. Furthermore, 31 cities also collect an additional city B&O tax. In 2002, licensees in areas with a city B&O tax paid approximately \$165,000 (in addition to the state B&O tax).*

Key Findings Continued

- *Gambling taxes, as an average, were not more than 1.2% of total revenues for the cities (based on a 2002 survey by the Association of Washington Cities). However, for six cities gambling taxes accounted for more than 5% of their revenue. For La Center, nearly 75% of their revenue was from gambling taxes.*
- *Based on this research, there is not equity in the current tax structure. Because of the disparity in tax rates from jurisdiction to jurisdiction, it is possible for two neighbors on the border between jurisdictions to pay a different amount in gambling taxes for exactly the same amount of net receipts.*
- *To a lesser extent, city B&O taxes can also lead to an overall disparity in taxes for gambling operators.*

GAMBLING COMMISSION

PO Box 42400 Olympia Washington 98504-2400 (360)486-3440 TTD (360) 486-3637 FAX (360) 486-3625

February 6, 2004

To: Amy R. Blume, Administrator, Communications and Legal Division
From: ^{M.A.F.} Melinda A. Froud, Staff Attorney
RE: Public Policy Research – Gambling Taxes

You asked me to research the history of gambling tax in Washington, including a review of the following:

1. The statutory structure in Washington State, which limited the authority to tax gambling to local jurisdictions;
2. Review legislative history available and news articles from 1973;
3. Was the assessment a "sin tax" designed to decrease gambling or was it designed to help local government fund enforcement;
4. Information about the intent of taxing gambling or how funds were to be used; and
5. Government reaction to changes in legalized gambling.

I. Statutory Structure.

Prior to the passage of the Gambling Act of 1973, Governor Evans established the Governor's *Ad Hoc* Committee on Gambling.¹ His charge to the Committee directed that the members endeavor to find the will of the people, interpret it, if possible, and apply that information to the different forms of gambling which might be legalized under the terms of Senate Joint Resolution No. 5. (SJR 5 amended the State Constitution, authorizing the Legislature to permit lotteries.) The Governor directed the Committee to study the various forms of gambling activities, make long and short range recommendations, and submit a report by February 10, 1973.

In establishing guidelines for preparation of its report, the Committee assigned a low priority to legalized gambling activities that could provide alternative revenue for the State, and it designated the revenue question as "the last of its priorities." The Committee based this decision upon the limited return projected for the State from gambling revenues, the State's involvement in gambling promotion, and "reservations

¹ In order to research the legislative intent surrounding the gambling tax and related issues, I reviewed the Governor's *Ad Hoc* Committee Report dated February 9, 1973. This report was completed before the original bill for the Gambling Act was submitted to the Legislature.

about the revenues being a significant factor in the minds of the citizens who voted for SJR 5.”

However, it appears the Committee contemplated that some revenues would be available to the State and/or local jurisdictions. In its report, the Committee unanimously recommended a "local veto;" local jurisdictions should be permitted to prohibit, but not regulate, any form of legalized gambling. The recommendation also provided that any local jurisdiction which opted not to permit a given form of legalized gambling "would not receive revenue shares from that gambling." Although the report is silent as to how such revenues would be distributed, the concept of "revenue shares" suggests that at least one other party would receive funds in addition to the local jurisdiction in which the activity was conducted.

II. Legislative History.

The Gambling Act of 1973 originated in the House of Representatives as House Bill No. 711. The House Journal from the 1973 Session shows that the bill provided for local governments to levy and benefit from gambling taxes, although there are no records that reflect the reason for this determination² The original bill also proposed local taxation as a prerequisite for the issuance of gambling licenses:

PROVIDED, That should no such tax be levied by any county, city, city-county, or town by local law or ordinance on such gambling activity, no license thereof in such respective jurisdiction shall be issued by the commission.

Several members of the House moved for an amendment to strike this language. The amendment failed, although no details are available concerning the discussions for or against the proposal. The Senate later struck this language from the bill.

In addition to the local tax, the House also proposed a schedule of different tax rates, ranging from five to eight percent for bingo, raffles, amusement games, and punch boards; one proposal was for the Commission to levy and collect the taxes.

After the substitute bill reached the Senate, members passed a number of amendments referred to as the "local veto." As recommended by the Governor's *Ad Hoc* Committee, these amendments provided for counties to veto any one or more of the permitted activities. Additionally, cities of the "first class" (defined by a city population exceeding 20,000) also had an independent veto right as to one or more of the activities.

The local veto provision was important, as it influenced amendments passed by the Senate regarding the levying of gambling taxes:

² The journals of the House of Representatives and the Senate document the daily activities of legislative branch, including details related to all bills under consideration. Journals provide the evolution of the HB 711 bill and discussions surrounding proposed amendments thereto.

The most important features of this bill with these amendments if adopted are that the local municipality, cities and counties, will retain basic control and taxing authority. There is no taxing authority at the state level. The reason for that basically is that if we had left taxing authority solely at state level then obviously it seems to me the various municipalities and counties would say, 'Well, if we are not going to be able to derive any moneys from these activities in the form of tax revenues, why should we permit them?' And under the local veto provisions that are also in here they probably would not have permitted these activities. And that is the reason for that.

The Senate also changed the tax rates set by the House for each activity to a ten percent maximum for all activities. There are no records available to reflect the reasons behind this change. However, the Senate Journal notes a couple of exchanges concerning the local taxes and revenues. Senator Twigg stated that within the ten percent limit, the local jurisdictions could establish taxes for the different gambling activities. The senator also explained that with regards to the disposition of the revenue, funds were to go entirely to the local taxing authority, while license fees were to go to the state: “[The gambling tax revenue] all goes to the local level. I might qualify that, Senator. The licensing fees go to the state level but they are modest in nature and designed only to cover the expenses of the gambling commission.” In a subsequent discussion between members, Senator Twigg clarified that ten percent was the limiting figure to be based upon gross receipts, and that the licensing fees were separate from the local taxes.

III. "Sin Tax" Deterrent or Funding for Law Enforcement?

The absence of any "sin tax" discussions on the record indicates that this was not the legislators' intent. As the tax was contemplated in some form by both parties from the bill's origination, it is likely that enforcement was underlying concern, not deterrence. In fact, one of the Senate Journal entries documents some discussion among the members as to whether the ten percent tax ceiling was too high, as it was to be taxed on the gross receipts. Local jurisdictions still had discretion to tax at lower levels, which would have been much less of a deterrent. Moreover, RCW 9.46.113 and the subsequent case history clearly show the relationship between the gambling tax and enforcement of regulations, as explained below.

IV. Court Cases Interpreting Use of Gambling Taxes.

In 1975, the legislature passed a law concerning the use of tax revenues, which was codified as RCW 9.46.113. That statute provides that local taxing jurisdictions "shall use the revenue from such tax primarily for the purpose of enforcement of the provisions of this chapter . . ." Over time, questions arose regarding proper use of the tax revenues.

The state Attorney General's Office prepared two official opinions in 1976 and 1986 on the subject of "primarily" as used in RCW 9.46.113. However, the Washington State

Supreme Court subsequently acknowledged in *American Legion Post No. 32 v. City of Walla Walla*, 116 Wash 2d. 1 (1991), that those opinions were not controlling. *American Legion* involved a constitutional challenge against the City of Walla Walla for the collection of gambling taxes, and the assessment of penalties for late payment of such taxes.

In the case, the appellant argued that the City was not using the gambling taxes primarily for the enforcement of the Gambling Act. The Court found that the appellant failed to demonstrate the requisite standing to raise a constitutional challenge³, and instead turned its attention to defining the terms "primarily" and "enforcement" to render its opinion. The court defined "primarily" to mean "in the first instance," and not "substantially," stating that "regardless of amount, the tax must be utilized first of all to enforce the gambling act. If this requires all of the revenue, then it must be utilized. Similarly, if only 5 percent is needed, then that is all that must be used." *American Legion Post No. 32*, 116 Wash 2d. at 9.

Although the court declared that gambling tax revenues must only be used to the extent needed for enforcement, the Court's definition of "enforcement" was much broader than that contemplated by the Legion:

RCW 9.46.010 essentially provides that enforcement of the gambling act pertains to the regulation and enforcement of all factors incident to the activities authorized in the act. Based on this legislative declaration of intent and the applicable dictionary definitions, we hold that "enforcement" as used in RCW 9.46.113 entails the regulation of and compelling compliance with all requirements specified under the gambling act. This envelops much more than that advocated by Legion. Further, Legion offers no evidence that Walla Walla has not been enforcing the act as mandated. We find that the relatively low rate of gambling-related offenses indicates otherwise.

Enforcement does not necessarily encompass only that police activity which can be specifically related to gambling, as Legion contends. Among other things, it would be ludicrous to suggest that general police presence in the community does not have an inhibitive effect on those who contemplate engaging in illegal gambling. Police do not exist merely to deal with existent crime; they also act as a deterrent to the establishment of crime.

Id. at 10.

In its recitation of the facts of the case, the court also noted other law enforcement expenses not discussed here, such as paying for officers' salaries while they attend the police training academy, and providing some on-going gambling training. The court

³ The court found that the appellant failed to demonstrate that it had a unique legal right or privilege different from other taxpayers that was violated by the City's levy and use of the gambling tax.

found that although the gambling dollars were not readily traceable, it was appropriate for the City to place the tax in the general police budget, as “. . . it is indisputable that the general presence and continuous activity of the police within the community impacts and helps to deter illegal gambling.” *Id.* at 11. Given these parameters, it would be difficult for a licensee to prevail on the claim that a local municipality required only a portion of the tax revenues to enforce the Gambling Act.

V. Local Government Reaction.

As gambling has expanded in recent years, local governments have responded differently. The competing factors appear to be resistance to local gambling establishments versus the need for revenue. By September 2003, at least 52 local governments had enacted ordinances to prohibit new and/or existing card rooms.⁴ Approximately one-third of the jurisdictions had either a moratorium or an ordinance in place by 1999, when agency staff began tracking the dates of these prohibitions. A few other jurisdictions had enacted ordinances that provide zoning for card rooms.

In contrast, some local jurisdictions that permit gambling activities and collect taxes from operators appear to have been affected by increased competition within the card room industry. In a sampling of fifteen cities and four major counties that currently or previously had house-banked card rooms within their jurisdictions, 14 house-banked card rooms have closed. (See attached.) Several of the affected jurisdictions have reduced the tax rate for the remaining card rooms from the twenty percent maximum to rates ranging between five and ten percent. As indicated on the attachment, several other local governments which have not had house-banked card rooms in their jurisdictions have also reduced their tax from the maximum rate, perhaps in anticipation of attracting future operators and their resulting tax revenues.

⁴ The agency website was the source of information for Section V.

*By Categories of
Non-Tribal Gambling*

Changes in Market Share By Categories of Non-Tribal Gambling

Summary:

- The non-tribal commercial operators have seen the most significant increase in market share, most notably because of the relatively recent increase in the share for card rooms.
- Commercial net receipts have increased from 55% of market share in 1985 to 86% in 2003.

- Charitable/nonprofit operators have seen decreased market share. The statistics show that the decrease was evident in 1994, but the decrease accelerated after this time reducing the market share for the nonprofit significantly.
- Charitable/nonprofit net receipts have declined from 45% market share in 1985 to just 14% in 2003.
- There has also been a decline in net receipts for commercial punchboard/pull-tab operators (reduced by 28 percentage points) and by the charitable/nonprofit operators (reduced by 9 percentage points).

- While commercial operators now have 86% of the market share for net receipts, they pay 93% of the taxes.
- Nonprofit operators, on the other hand, currently have 14% of the market share for net receipts and pay just 7% of the taxes (down from 40% in 1985).

Commercial Punchboard/Pull-tab Activities:

- Commercial net receipts increased in 1994 to 53% of market share.
- Commercial taxes paid grew to 59% of total gambling taxes paid in 1994.
- Commercial operators saw a significant reduction in net receipts by 2003, dropping to just 25% of market share (a reduction of 28 percentage points). The reduction was reflected in the decrease in 2003 to just 31% of taxes for the commercial operators.

Nonprofit Punchboard/Pull-tab Activities:

- In 1994, net receipts declined by 5% for nonprofits to 22% of market share.
- Taxes paid by the nonprofits in 1994 had dropped to 16% of the total gambling taxes paid (dropping by 3 percentage points).
- Nonprofit operators also saw a significant reduction in net receipts by 2003, with just 8% of the market share (a decline of 14 percentage points). The reduction was reflected also in the taxes in 2003 to just 3% of the total gambling taxes paid (a drop of 13 percentage points).

Range of Tax Rates

Cities

Gambling Taxes Summary

Based Upon the 2002 Survey

Conducted by the Washington Association of Cities¹

- Only 33% of cities (32 of 96) tax at the maximum level for card rooms, which is 20% of gross receipts.
- About half of the cities that tax punchboard/pull-tab activities tax at the maximum level, which is 10% of net receipts for charitable/nonprofit organizations. For commercial operators, at the city's option, it is 5% of gross receipts or 10% of net receipts.
- Only 8 of the 280 cities (Castle Rock, Centralia, Gig Harbor, Kirkland, Naches, Pasco, Spokane, and University Place) tax at the maximum rates for all activities.
- Over 80% of cities that tax raffles, bingo, and amusement games tax at the maximum rates.
- Seventy-five jurisdictions have gambling but do not tax it.
- Spokane taxes at the maximum rate. Spokane is the largest city to tax at the maximum rate for all activities.
- In 2002, Spokane (population 197,400) had six card rooms (five were house-banked) while Tacoma had five (three were house-banked). Spokane taxes at the maximum 20% rate, while Tacoma (population 196,300) taxes at 11%. Spokane card room gross receipts totaled \$7.8 M in 2002, bringing in nearly \$1.5 M in gambling tax revenue (based on reported taxes) for the city. Tacoma card room gross receipts totaled \$4.8 M for the same time period, bringing in approximately \$600,000 in gambling tax revenue for that city.
- Spokane County taxes card rooms at 15% of net win. This means that those in the City of Spokane pay 20% and those in the county pay 5% less in gambling taxes. Nonprofit punchboard/pull-tab operators also pay less in gambling taxes in Spokane County. The tax rate for this group is 5%, whereas in the City of Spokane, the tax rate is 10%.

¹ For exact tax rates, see the Appendix.

Range of Tax Rates

Counties

County Tax Rates¹

Calendar Year 2002

- A total of \$44.1 million was reported as paid in gambling taxes to local jurisdictions for all gambling activities. The licensees also paid a total of \$6.4 million in B&O taxes.
- Each county can have many tax rates within its boundaries. This is because each incorporated city can set their own rate and the unincorporated county can also set a different rate.
- King County has the highest population. They also have more gambling licenses issued than any other county. Pierce County has the second highest number of gambling licenses which also reflects the second highest population. Snohomish County follows in both population and gambling licenses. Not surprisingly, the total gambling gross receipts in these counties reflect their ranking by number of gambling licenses. Taxes also follow the same ranking for the counties.

¹ The tax rates set by some of the counties are shown in the Appendix.

B & O Taxes

B & O Taxes
For Gambling Activities for Calendar Year 2002

- Washington does not have a state gambling tax. However, we do have a B&O tax, which is .015% on gambling net receipts.
- State B&O taxes were \$6.2 million for bingo (\$.5 million), punchboard/pull-tabs (\$2 million), and card rooms (3.7 million).
- Gambling taxes for bingo (\$1.4 million), punchboard/pull-tabs (15.6 million), and card rooms (\$26.8 million) totaled \$43.8 million.
- There are 31 cities that have an additional city B&O tax, according to the Association of Washington Cities. The tax rate varies by city. See the Appendix for exact rates for each city.
- City B&O tax for bingo, punchboard/pull-tabs, and card rooms totaled an additional \$164,823 for these cities.

*Percent of
Gambling
Taxes*

Local Revenue

Gambling Taxes
As a Percentage of City Operating Revenue*
For the Calendar Year 2002

- Revenue from gambling taxes is greater than 5% percentage of the city's operating revenues for the following cities: Clarkston (5.7%), Kenmore (6.8%), La Center (74.9%), Lakewood (5.4%), Millwood (5.8%), and Shoreline (9.3%).
- The only city to exceed 10% was La Center.
- The overall gambling tax rate average as a percent of Total Operating Revenues is 1.2%. This means that gambling taxes, as an average, do not equate to more than 1.2% of total revenues for the cities.

* County budgets not available, so only cities are noted in this report. Data supplied by the Association of Washington Cities.

License Fees and Assessments

STATE NAME population (2000 Census)	ACTIVITY	License fees or Assessments?
Oregon 3.4 million	Video Lottery	No, contract with retailers; set up fee appr. \$700 & monthly phone line charge \$100 mo for Video; amusement device tax based on sales (\$60-\$100 per yr)
	Charitable Gaming Total	
	Detail: Bingo	Class A-\$100; B- \$50; C-\$20; D-\$20
	Pull-Tabs	
	Raffles	Class A-\$50; B-\$20
	Planet Bingo	
	Other	
South Dakota .8 million	<u>Bingo</u> -not regulated	License only manufacturers & distributors
	<u>Pull-tabs</u> -not regulated	
	<u>Raffles</u> -not regulated	
	<u>Casinos (includes BJ, HB, Player-banked, & slots)</u>	Annual device fee of \$2,000
	Amusement Games	\$12 per machine registration fee

* License fees and assessments are higher in Washington than in other states. This was not a surprising finding. Based on information gathered through participation in the North American Gaming Regulators Association, we have stronger regulatory programs than in other states. In addition, several states utilize state gambling taxes for funding regulatory functions (including Colorado, Michigan, Minnesota, Oregon, and South Dakota).

County Tax Rates Calendar Year 2002 ¹

- This report summarizes the relationship between gross receipts, number of licenses, and gambling taxes in the counties (which includes incorporated cities and unincorporated areas of the county).
- King County has the highest population. They also had more gambling licenses in 2002 than any other county. Pierce County had the second highest number of gambling licenses, which also reflects the second highest population. Snohomish County follows in both population and gambling licenses. Not surprisingly, the total gambling gross receipts in these counties reflect their ranking by number of gambling licenses. Taxes also follow the same ranking for the counties.
- Garfield has the smallest population of any county. It also had the smallest number of gambling licenses (3). Accordingly, gross receipts and taxes for Garfield County were the lowest of all counties in the state.
- In 2002, King County had more punchboard/pull-tab licensees (404) than any other county (includes incorporated cities and unincorporated areas of the county). King County also had more bingo licensees (50) than any other county.
- The number of bingo licensees does not always mean more in gambling tax revenue for the local government. For instance, in Clark County in 2002, there were 12 bingo licensees. Licensees in Clark County reported paying \$173,811 in gambling taxes to their local jurisdiction in 2002 (either an incorporated city or the county). In Spokane County, there were 19 bingo licensees. One might expect higher gambling taxes in this county. However, gambling taxes in Spokane County (both incorporated cities and county) totaled \$142,652 for 2002. In Snohomish County, there were 32 bingo licensees, which totaled \$155,817 in gambling taxes (includes incorporated cities and the county).
- Similarly, the number of licensees does not predict the level of gross receipts or gambling taxes. For instance, in Benton County, there were four house-banked card rooms in 2002. These card rooms generated \$8,017,254 in gross receipts and reported paying gambling taxes of \$807,255 (to the incorporated cities or the county). Thurston County also had four card rooms, but only one was house-banked. These card rooms reported \$4,020,388 in gross receipts and paying \$393,483 in gambling taxes in 2002 (to the incorporated cities or the county).
- The reason there is such disparity for gambling taxes and gross receipts for the number of licensees points to two main factors. First, the various cities and counties have different tax rates. Second, every licensee does not have the same gross receipts. One city with four licensees might have a 2% tax rate for their pull-tabs and another city with the same number of licensees might tax at the maximum rate.

¹ Because the Association of Washington Cities' survey was for calendar year 2002, we have used calendar year 2002 data for this report.

Tax Exceeds Maximum Rate

* Based on information from the Association of Washington Cities, these cities have a separate B&O tax rate.

These cities have a separate B&O tax, but do not have any bingo activity reported -- Algona, Bainbridge Island, Black Diamond, Cosmopolis, Darrington, Dupont, Lake Forest Park, Long Beach, Mercer Island, Pacific, Port Townsend, Rainier, Roy, Ruston, and Tumwater.

NOTE: Small bingo organizations that only operate a few times a year do not pay B&O taxes.
