## **RULES OF PLAY**

**Commission Free Dragon Bonus** is a version of mini-baccarat. The game play is identical to standard mini-baccarat, with two exceptions:

- Banker bets push if they win with a three-card total of 7.
- Winning Banker bets are not charged commission.

### **OPTIONAL BONUS WAGERS:**

This game features two optional wagers: **Dragon Bonus** and **Fortune 7**. There are two betting spots per position for **Dragon Bonus** (Player and Banker) and one betting spot per position for Fortune

7. It is up to the sole discretion of the casino if the casino requires the player to make the original Mini-Baccarat wager.

The **Dragon Bonus** wager wins if:

1. The selected hand for the **Dragon Bonus** wager is a natural (two-card 8 or 9) winner; or
2. The selected hand for the **Dragon Bonus** wager is a non-natural that wins by four or more points.

The **Fortune 7** bet wins if the Banker wins with a three-card total of 7 points.

### **Dealing Procedures**

1. Players must make the Dragon Bonus and Fortune 7 wagers before the dealer deals any cards.
2. The dealer will then deal the traditional Mini-Baccarat hand according to house procedures.
3. When the hand is over, the dealer will reconcile traditional Mini-Baccarat wagers according to house procedures.
4. Casinos can reconcile bonus bets any way they like. Example: Remove losing bets immediately, and then pay winners.
5. Notes on naturals:
  - a. Natural\* winners always pay even-money on the Dragon Bonus bet.
  - b. In the event of a natural\* tie (8-8, 9-9), the Dragon Bonus pushes.
    - i. All other ties will result in Dragon Bonus bet losing.

\*Natural= Two-card total consisting of 8 or 9.

## PROGRESSIVE SYSTEMS FLEXIBILITY and RECOMMENDATIONS:

- Progressive meter contribution
  - When using a pay table in which all payouts are deducted from the meter, we recommend utilizing the system to configure meter contribution rates anywhere between 0-100%.
    - Most pay tables with this style of math are designed to grow over time when a contribution rate of 70% or more is used. If less is contributed, the risk of the meter “running dry” increases.
  - When using a pay table in which only the progressive (percentage) pays are deducted from the meter, we recommend only reducing the pre-configured meter contribution rate if any changes are made. Adjusting the contribution rate above the pre-configured value would reduce the mathematical house advantage of the wager.
  
- Reserve contribution
  - We recommend contributing a small portion of each progressive wager to the reserve. This amount will be added on to any configured seed amount after a 100% award is given, and will help reduce the drop in play expected after a jackpot hits.
  - We do not recommend eliminating a seed amount entirely and using the reserve as the only seed mechanism. All games present a certain likelihood of back-to-back awards, and this method runs the risk of restarting the meter at a very low amount in that case.
  
- Seed amount
  - We recommend using the pre-configured seed amount in the system. This amount is specific to the pay table selected for use, and is designed to offer a reasonable starting point that works with the pay table’s math.
  - If any changes are made, we recommend the seed amount to be at least as large as the largest “fixed” award on the pay table.
  - We do not recommend configuring a \$0 seed amount.

## PROGRESSIVE SYSTEMS FLEXIBILITY and RECOMMENDATIONS:

- Progressive meter contribution
  - When using a pay table in which all payouts are deducted from the meter, we recommend utilizing the system to configure meter contribution rates anywhere between 0-100%.
    - Most pay tables with this style of math are designed to grow over time when a contribution rate of 70% or more is used. If less is contributed, the risk of the meter “running dry” increases.
  - When using a pay table in which only the progressive (percentage) pays are deducted from the meter, we recommend only reducing the pre-configured meter contribution rate if any changes are made. Adjusting the contribution rate above the pre-configured value would reduce the mathematical house advantage of the wager.
  
- Reserve contribution
  - We recommend contributing a small portion of each progressive wager to the reserve. This amount will be added on to any configured seed amount after a 100% award is given, and will help reduce the drop in play expected after a jackpot hits.
  - We do not recommend eliminating a seed amount entirely and using the reserve as the only seed mechanism. All games present a certain likelihood of back-to-back awards, and this method runs the risk of restarting the meter at a very low amount in that case.
  
- Seed amount
  - We recommend using the pre-configured seed amount in the system. This amount is specific to the pay table selected for use, and is designed to offer a reasonable starting point that works with the pay table’s math.
  - If any changes are made, we recommend the seed amount to be at least as large as the largest “fixed” award on the pay table.
  - We do not recommend configuring a \$0 seed amount.
