Re: Hal's Ticket Mine

Dear Mr. Berger,

Thank you for submitting the Hal's Ticket Mine amusement game, manufactured by Jennison Entertainment Technologies Corporation, to us for review. We have completed our review.

It is my understanding the game plays as follows:

The player cranks the handle to raise the Styrofoam disk within the tube. The goal is to stop the disk on the highest point value within a given time period. Point values are located to the left of the tube and correspond to different ticket amounts. Wherever the disk is at the end of game play, determines what ticket value is won. Tickets are awarded when the game is over.

The Hal's Ticket Mine amusement game meets the definition of an amusement game (RCW 9.46.0201) and is approved for use as a Group 5 Hand/Eye Coordination (WAC 230-13-035) amusement game in Washington State.

Please be advised that any modifications to the Hal's Ticket Mine amusement game software or associated equipment must be provided to us for additional testing and review. In addition, amusement games operated in Washington must not have settings that allow the operator to control the outcome of the game (auto percentaging). The approval of this equipment may be rescinded at any time if problems are found by the Commission or changes to the Washington Administrative Code (WAC) impact this approval. If you have any questions or concerns, please contact Sonja Dolson at (425) 277-7026.

Sincerely,

Josh Stueckle
